HOME ENERGY SAFETY TIPS

Invest in smoke detectors and carbon monoxide alarms.

Install smoke detectors on every level of your house and outside each sleeping area. Replace the batteries twice a year (unless you have a new model with a 10-year battery). Carbon monoxide alarms notify you when a defective heater that burns natural gas, oil, propane, wood, or kerosene is emitting this odorless gas into your home. Symptoms of carbon monoxide poisoning include dizziness, fatigue, headache, nausea, irregular breathing, and confusion. If you think you have the flu but get better when you leave the house, carbon monoxide may be the cause.

Use caution when handling appliances and electrical equipment.

Never insert metal objects into appliances (such as putting a knife into a toaster), and always unplug appliances before handling them. Never touch appliances, wires, or electrical switches with wet hands.

Check wires for signs of wear.

Replace electrical cords if they are cracked or frayed. Prevent damage by never pulling plugs out by the cord.

Don't overload outlets.

Plugging too many appliances into one outlet can cause a fire hazard.

Keep everyone away from downed wires.

Call 911 if there is a fallen power line near your home.
