

ELECTRIC SAFETY TIPS

It's very important to stay safe around electricity. Here are a few ways to make sure you don't get hurt:

NEVER stick things into electrical sockets!

NEVER go near downed power lines. If you see one, tell an adult right away!

Water and electricity don't mix! So **NEVER** put electric appliances near water.

DON'T plug too many cords into an outlet.

Climbing is fun, but don't climb utility poles or trees that are close to power lines.

Frayed power cords can be dangerous. Tell your parents about damaged plugs and cords.
