

FOGs MAKE CLOGS!

**Keep fats,
oils, and
grease
out of sinks
and toilets**

FOGs stands for fats,
oils, and grease.

Things like bacon grease, cooking oil, and melted butter. It's important to keep them out of toilets and sinks because they can clog the pipes in your home and become a big problem for sewer systems.

FOGs should go in the garbage instead of down the drain. Liquids like used cooking oil should be put in a can or jar first.

FOGs are sticky. They stick to each other and to the insides of pipes. Once FOGs get into the sewer, they can even form giant fatbergs that collect garbage and dirt. YUCK!

So remember:

**Don't make a
splash. Put FOGs
in the trash!**
