

WHO CLEANS OUR WATER?

After we use water and it goes down the drain, it's dirty. This dirty water is called **wastewater**.

The wastewater flows through pipes under the ground to the wastewater treatment plant where it gets cleaned.

Wastewater plants do a lot of work, and they need your help! Don't flush or pour these things down the drain:

- Chemicals
- Wipes
- Medicine
- Paint
- Fats, Oils, or Greases

Remember, clean water is good for everybody!
