

LUKE^AND LILLY

THE ENERGY SAVING
LED LIGHTBULBS

LED lightbulbs save lots of energy, but there are plenty of other ways to save energy around your home:

Close the door when you come in or go out. That way the air that's in the house stays in.

Turn off your computer when you're done with it.

Think about what you want before you open the fridge.

Turn off the faucet while you brush your teeth.

Turn off the TV when you're done watching.

Turn off your video games when you're not playing with them.

When your phone is done charging, take the plug out of the wall.
